SRE – Site Reliability Engineer | Unix Infrastructure Specialist | Automation

Qualifications

- 15 years of experience in multinational companies, national firms, and IT consulting firms, such as HP, Stefanini, Tivit, T-Systems, and IBM. Specialized in IT infrastructure and Unix/Linux operating systems with strong expertise in automation using Ansible.
- Experience to manage Windows Servers 2016/2019/2022, Active-Directory and General Configuration.
- Experience in financial, retail, and healthcare sectors, supporting internal and external clients and ensuring the performance of critical applications such as DNS and other essential services.
- Strong relationship-building with clients and strategic partners, managing complex business projects, outsourcing, and end-user solutions.
- Developed automation solutions to reduce operational costs, improve computational performance, and accelerate the adoption of new technologies such as cloud computing and data center migrations.
- Expertise in legacy system modernization, promoting Digital Transformation as a competitive advantage for clients.
- Experience in mission-critical environments involving virtualization, performance optimization, and problem resolution.
- Performance optimization using monitoring tools such as Nagios, Zabbix, and Dynatrace.
- Implementation of IT security patches following industry best practices, including hardening of physical and virtual servers.
- Awarded bonuses for exceeding performance goals by over 120% for successful data center migrations in 2019 (Stefanini) and 2021 (IBM).
- Development of Ansible Playbooks for DB2, WebSphere, and multi-platform operating systems (Zlinux, AIX, Linux - RedHat and Suse). Example: Automated WebSphere installation with Middleware support, testing, and validation. Migration of IBM's two-factor authentication system across AIX, Linux, zLinux, and Windows.
- Migration of Virtual Machines to containers, involving Java applications, web services, and middleware.

Education

- **Bachelor's Degree in Systems Analysis and Development** – UNIP / 2014

Main Courses & Certifications

- **Trainning and Certification – LinuxTips – DevOps Week**
- **Azure Fundamentals (AZ-900)** – Microsoft | 2021
- **Docker Essentials** – IBM | 2024
- **Fundamentals of IBM Cloud Associate SRE V2** – IBM | 2024
- **Site Reliability Engineer Professional Certification – Experience** – IBM | 2023
- **Additional Training:**
    - Linux Administration (LPIC-1 & LPIC-2)
    - Network and Security Engineering
    - Penetration Testing – Ethical Hacking
    - Server Hardening – ISO 27002
    - Monitoring with Zabbix and Grafana
    - Middleware Basics (WebSphere, MQ, and other IBM products)
    - RedHat OpenShift Administration
    - RedHat Container Administration
    - RedHat Automation Platform
    - Dynatrace Monitoring
    - Self-study in Python programming

Languages

- **Advanced English**

Professional Experience

Ambev Tech *(August 2024 – Present)*

Senior Unix Consultant

- Unix and Linux administration
- OS patch management and upgrades
- Cluster administration (PowerHA, Pacemaker)
- Automation using Rundeck
- Management of on-premises virtual machines, HMC, and VIOs
- IBM Cloud and Azure Cloud administration
- Migration of on-premises servers to cloud

IBM Brazil *(May 2022 – May 2024)*

Senior SRE Analyst

- Development of global Ansible automation, reducing manual tasks
- Use of AI tools (WatsonX, Ansible Lightspeed) to accelerate automation deployment
- IBM internal infrastructure support (change management, incident resolution, vulnerability fixes)
- Migration of applications to IBM Cloud and virtualization platforms (OpenShift, Containerization)
- Implementation of software update calendars and infrastructure improvements
- Participation in IBM's mentorship and knowledge-sharing program

Infosys Consulting LTDA *(August 2021 – May 2022)*

Senior Infrastructure Consultant

- Cloud migration projects (AWS, Azure, Google Cloud)
- Recognized as "Technical Leader" for exceeding annual targets
- Key project: Development of a new website and application integration for Mercedes-Daimler Truck

T-Systems do Brasil *(May 2021 – October 2021)*

Unix Infrastructure Analyst III

- Administration of Linux/Unix physical and virtual servers
- ITIL-based incident, change, and problem management
- Storage migration planning and execution for external clients
- Recognized for leadership in handling unforeseen issues during maintenance windows

Stefanini IT Solutions *(October 2018 – May 2021)*

Senior Linux/Unix Support Analyst

- Cost analysis and planning for full data center migration
- Network and server setup at CenturyLink Data Center
- Disaster recovery planning and migration strategy
- Recognized for the successful data center migration in 2019, improving platform performance and reducing legacy infrastructure costs
- Ongoing post-migration infrastructure administration, including security and monitoring improvements

TIVIT Terceirização de Serviços *(February 2014 – October 2018)*

Pleno Unix Support Analyst

- Administration of Unix/Linux servers (Solaris, AIX, Red Hat, Suse, HP-UX)
- ITIL-based incident, change, and problem resolution in critical production environments
- Cluster administration (HACMP, RHCS, Pacemaker, ServiceGuard, Veritas)
- Virtualization management (VMware ESX/ESXi, VSAN, VRealize, VSphere Replication)
- Patch management using Spacewalk and SUSE Manager
- Automation with Ansible Tower, Puppet, and Chef
- Integration with Identity and Access Management (IAM) systems
